EDUCATION

University of Glasgow

Glasgow, UK

MSc in Software Engineering with Honours of the First Class

September 2020 - June 2025

- **Dissertation:** Used ML to predict AWS costs from local application resource consumption
- **Courses:** Algorithms, UX Design, Databases, Networks, Generative AI, Computer Vision

SKILLS SUMMARY

- **Languages:** Python, Java, SQL, Typescript
- **Frameworks:** React, Spring, Django, NextJs
- **Tools:** Azure, AWS, Docker, Kubernetes, Prometheus, Grafana Figma, Git, Jenkins, Jira

EXPERIENCE

JP Morgan & Chase

Glasgow, UK

Full Stack Software Engineer

September 2025 - Present

Firmwide governance application, enforcing and automating compliance and audit of all software in the organization. Requiring a deep understanding of the SDLC and the software need of different lines of business.

- **AI and Automation:** Drove team adoption of AI-assisted development by building MCP-based tooling that provided LLMs with the business knowledge necessary to autonomously complete development up to the first round of review, reducing ticket-to-first-feedback time from days to hours (80%).
- **Observability and Infrastructure:** Built and owned observability for a Kubernetes application, introducing real-time alerting that reduced incident response to 1hr and minimised SLA breaches, alongside automated debugging scripts.
- **Client Support and Backend-end development:** Resolved 20+ daily tickets for a firm-wide governance platform, keeping resolution time consistently 3 days under SLA while supporting senior stakeholders (application owners, architects) and improving backend query efficiency by identifying optimal use of data.
- **Front-end:** Contributed to a major UI overhaul, building 10+ screens and extending an internal JSON→TSX framework to support API fallbacks, enabling a config-driven approach that allows UI changes without code deployment, accelerating the feedback cycle on text changes down to minutes.
- **Agile Teamwork:** Acted as Scrum Master for 40+ standups and delivered regular sprint demos, contributing to a fast-paced Agile team with end to end ownership of tickets covering requirements refinement to release in production.

University of Glasgow

Glasgow, UK

Teaching Assistant (Part-time)

September 2024 - April 2025

- **Leadership:** Led lab sessions for 100+ students, supported by an undergraduate demonstrator.
- **Teaching:** Delivered instruction in networks and operating systems, consistently receiving strong student feedback (top X%).

EY

London, UK

Technology Consultant Intern (Full-time)

September 2023 - July 2024

- **Adaptability:** Secured client bid by developing a website under a tight 3-day deadline, securing a subsequent project to deliver 4 chatbots.
- **Communication:** Collaborated with clients in 5 workshops, capturing their needs as requirements and earning confidence of superiors for further work with the clients.
- **Learning:** Picked up accounting and supply chain concepts over 2 weeks, mapping supply and payment processes across 6 applications in 2 months for an ERP software transformation project.
- **Project Management:** Led the UX design for a client bid, coordinating with 15 stakeholders, including 9 partners, and was awarded a financial commendation from superiors.
- **Development:** Deployed an open-source AI RAG chat-bot, creating a detailed walkthrough of its microservices architecture and executing it locally using Docker in under 5 days. The project utilized AWS, Elasticsearch, and Django as part of its microservice structure.

Censis

Glasgow, UK

Student Software Developer (Part-time)

September 2022 - April 2023

- **IoT:** Developed an IoT solution for welfare housing safety, programming listener chips in C and processing data through a neural network in a Python-based Django back-end.
- **Agile:** Coordinated with a team of 6 using Agile and Scrum methodologies, executing 3-week sprints and delivering presentations and demos at sprint review meetings.
- **Requirement Negotiation:** Negotiated requirements with the client and proposed 4 solutions to hardware limitations, recommending an IoT architecture that offloaded machine learning to the cloud, minimizing hardware costs.
- **Research:** Researched 7 machine learning approaches in python for time series classification and developed a neural network with 97% accuracy.

- **Testing:** Audited an undocumented C codebase of over 100 files, injecting code to identify and resolve performance limitations.
- **Client Communication:** Organised 8 meetings between the client and the team, acting as the primary point of contact. And was awarded an average of 21/22 score by examiners for sprint planning, prototype demo and delivery.

General Vet Supplies

Cordoba, Spain

Web Developer (Part-time)

June 2022 - September 2022

- **Development:** Re-designed UX and backend of the company's website, producing 17 pages and adding 6 new features from web traffic analysis to customer contact forms.
- **Project Management:** Owned development process, proposing 3 designs with wireframes and delivering a satisfactory product within 5 meetings.

CERTIFICATIONS AND COMPETITIONS

- **Azure 900 Certification:** Cloud Fundamentals **issued by Microsoft** - May 2024
- **Scrum SCM1 Certification:** Scrum Master **issued by Scrum.org** - October 2023
- **Meta Llama Impact London hackathon:** Created a LLM social media crawling system targeted at disaster control offering a dynamic dashboard for real time response.
Tech: Python, Stable Diffusion API, OpenAI API **Participant** - Nov 2024
- **Mistral AI London hackathon:** Innovated a web interface for visual and physical disabilities, using verbal I/O to control a multi-modal AI agent.
Tech: Python, Stable Diffusion API, OpenAI API **Participant** - Oct 2024
- **Glasgow University Tech Society hackathon:** Collaboratively developed an interactive game that used computer vision techniques to create a customized experience.
Tech: Python, Stable Diffusion API, OpenAI API **1st place, issued by J.P. Morgan** - Oct 2022
