EDUCATION

- University of Glasgow**
 - MSc in Software Engineering with Honours of the First Class*
 - Dissertation:** Cost-Effective Prediction of Cloud Instance Performance
 - Courses:** Algorithms, Databases, Networks, Data Science, Computer Vision, Full Stack Development
- Glasgow, UK
September 2020 - June 2025

SKILLS SUMMARY

- Programming Languages:** Python, Java, C++, SQL, HTML/CSS, Javascript
- Tools:** Azure Cloud, Docker, Django, Git, Node.js, React
- Soft Skills:** Agile Practices, Client Communication and Workshops, Project Management, CI/CD

EXPERIENCE

- Ernst & Young**
 - Technology Consultant Intern (Full-time)*
 - Development:** Bolstered EY's capabilities to secure chat-bot contracts by deploying an open-source artificial intelligence RAG chat-bot, creating a detailed walkthrough of its microservices architecture and executing it locally using Docker in under 5 days. The project utilized AWS, Elasticsearch, and Django as part of its microservice structure.
 - Automation:** Identified inefficiencies in cybersecurity division workflow and automated tasks through a document classification model and automated workflow, achieving 80% accuracy in a proof of concept.
 - Agile Methodologies:** Served as Scrum Master for a 2-month UX design project tied to a client bid, coordinating a 5-person team and engaged with 15 stakeholders, including 9 partners. Was awarded a financial commendation from superiors for the project.
 - Responsibility:** Owned coding section of a company sponsored volunteering event on teaching kids to code, where superiors relied entirely upon me to teach python to 15+ kids.
 - Leadership:** Conducted Q&A sessions for over 30 participants in two recruitment assessment centers.
 - Communication:** Interfaced with clients in 5 workshops, capturing their needs as requirements and earning confidence of superiors for further work with the clients.
 - Adaptability:** Secured client bid by developing a website under a tight 3-day deadline, securing a subsequent project to deliver 4 chatbots.
- Glasgow, UK
September 2023 - July 2024
- Censis**
 - Student Software Developer (Part-time)*
 - IoT:** Developed an IoT solution for welfare housing safety, programming listener chips in C and processing data through a neural network in a Python-based Django back-end.
 - Agile:** Coordinated with a team of 6 using Scrum and Agile methodologies, executing 3-week sprints and delivering presentations and demos at sprint review meetings. The quality of work and effective collaboration led to increased client satisfaction, resulting in an unsolicited financial bonus for the team
 - Testing:** Audited an undocumented C codebase of over 100 files, injecting code to identify and resolve performance limitations of hardware. The client agreed to the conclusions drawn, prompting a re-negotiation of requirements.
 - Requirement Negotiation:** Collaborated with additional client team to devise and propose 4 solutions to the client in order to overcome hardware limitations. Reached an agreement on an IoT architecture that offloaded machine learning to the cloud, minimizing hardware costs.
 - Research:** Researched 7 machine learning approaches in python for time series classification and developed a neural network with 97% accuracy.
 - Client Communication:** Organised 8 meetings between the client and the team, acting as the primary point of contact. Was awarded an average of 95% score by examiners for sprint planning, prototype demo and delivery.
- Glasgow, UK
September 2022 - April 2023
- General Vet Supplies**
 - Web Developer (Part-time)*
 - Development:** Re-designed UX and backend of the company's website, producing 17 pages and adding 6 new features from web traffic analysis to customer contact forms.
 - Project Management:** Owned the development process, proposing 3 designs with wireframes and delivering a satisfactory product within 5 meetings.
- Cordoba, Spain
June 2022 - September 2022

HONOURS AND AWARDS

- Azure 900 Certification:** Cloud Fundamentals issued by Microsoft - May 2024
- Scrum SCM1 Certification:** Scrum Master issued by Scrum.org - October 2023
- Mistral AI London hackathon:** Innovated a web interface for visual and physical disabilities, utilising voice input and output to control an artificial intelligence agent powered by multi-modal large language models to navigate and interact with the web, capable of completing forms, summarizing documents and correcting navigation mistakes on the go.
Tech: Python, LLMs, Mistral Models, OpenAI API Participant - Oct 2024
- Glasgow University Tech Society hackathon:** Collaboratively developed a dungeon game featuring AI-generated imagery and music based on player text input, utilizing face detection and extraction models to customize enemy faces within the maze.
Tech: Python, Stable Diffusion API, OpenAI API, Git 1st place, issued by J.P. Morgan - Oct 2022
